The evolution of science

Source: M.Haklay, 2016

The rise of “Citizen Science”

Since 1995, Citizen Science has been defined as:

- Expertise that exists among people traditionally seen as «ignorant» (Irwin, 1995);
- Research techniques that enlist the help of members of the public to gather scientific data (Bonney, 2009);

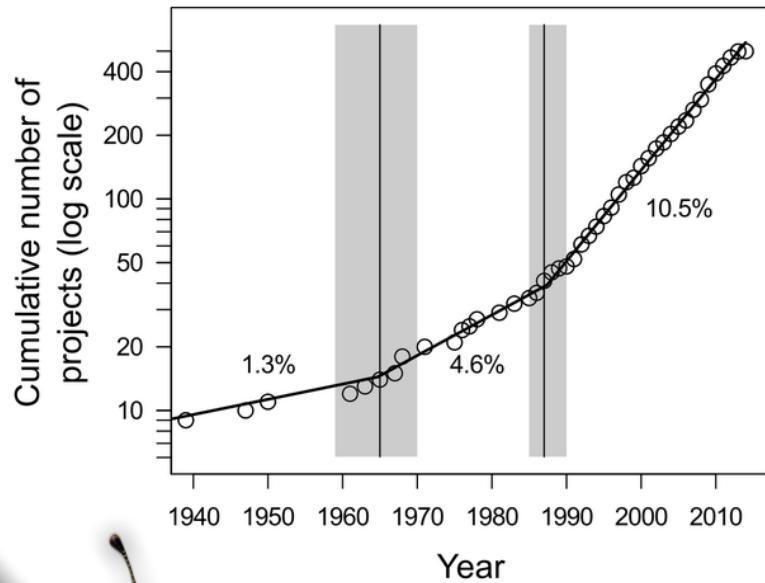

Citizen science:

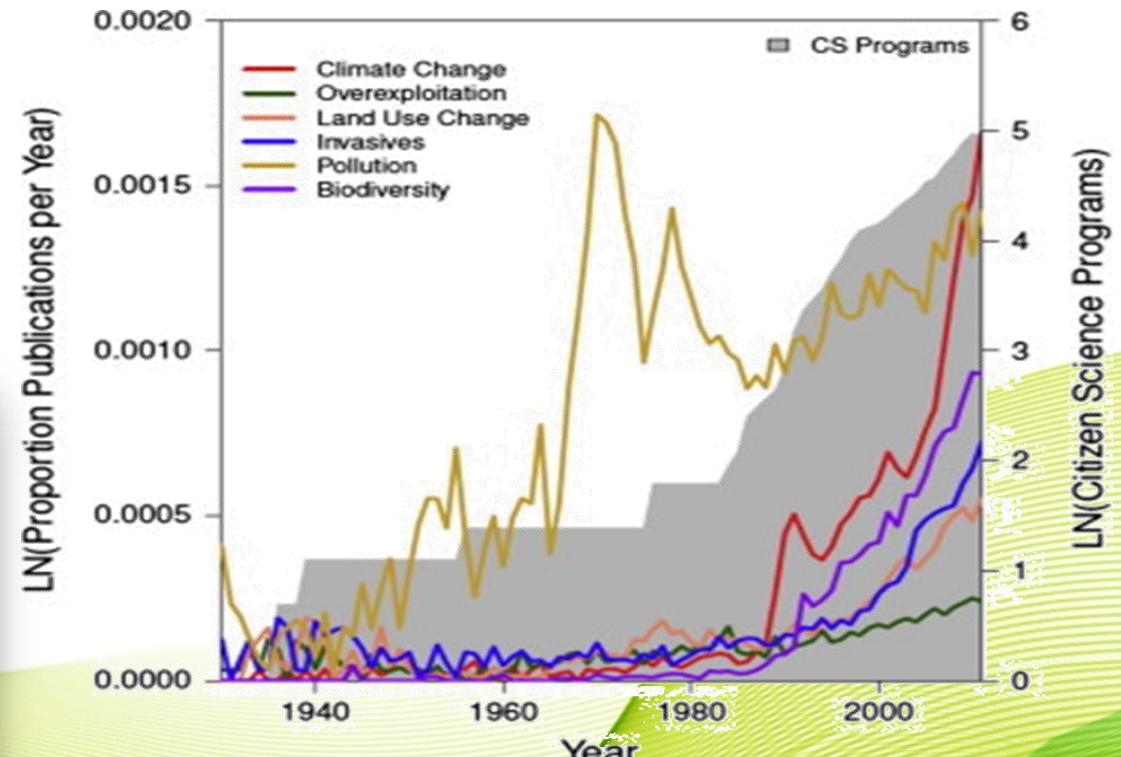

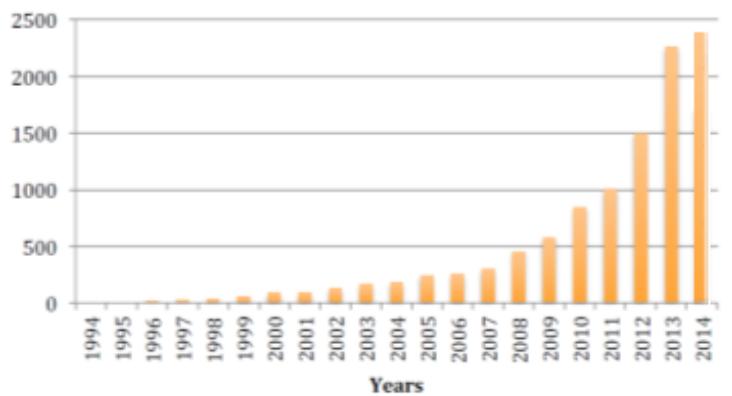

«scientific work undertaken by members of the general public, often in collaboration with or under the direction of professional scientists and scientific institutions»

Oxford English Dictionary, 2014

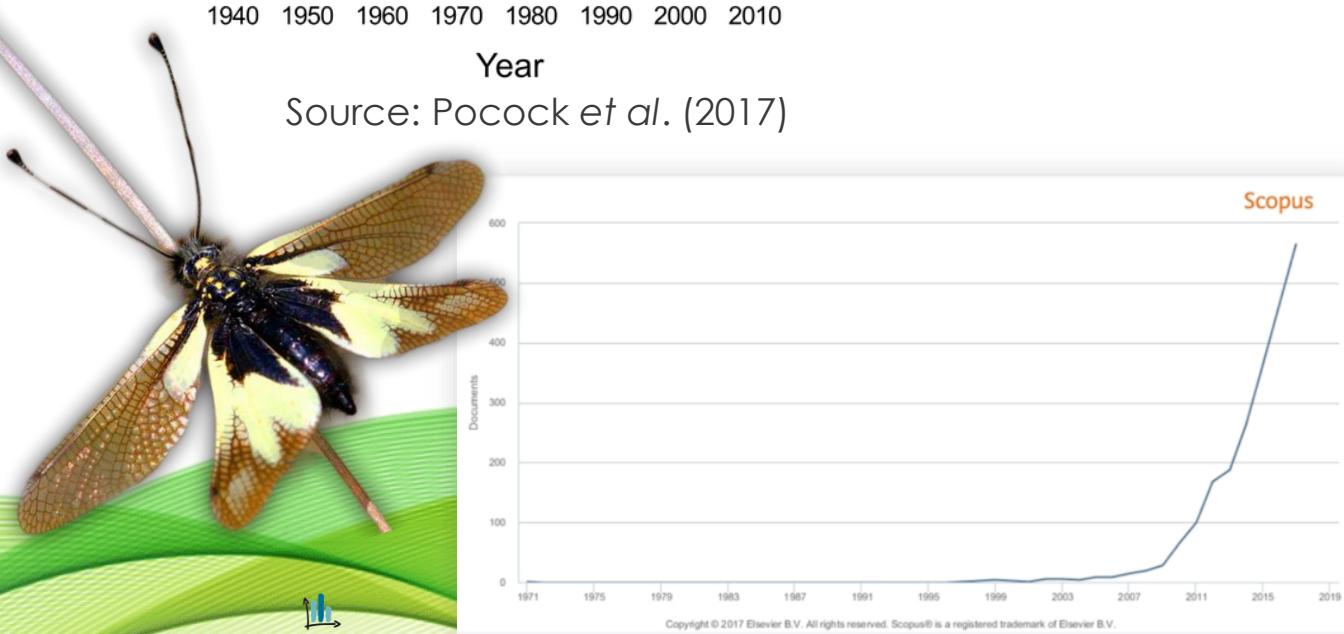

Scientific production ...

Rate of increase in the cumulative number of ecological and environmental citizen science projects as revealed by a systematic search.

Citizen science publications trend in the last two decades, according to scholar.google.com, searching for «citizen science» + «project».

Citizens collect plastic and data to protect Europe's marine environment

SCROLL DOWN ▾

MLW, set-up in 2014 and involving non-governmental organisations and research institutions, is the only pan-European platform that members of the public can use to co-ordinate clean ups and record beach litter. It aims to complement the collection of official marine litter data by national authorities and fill data gaps.

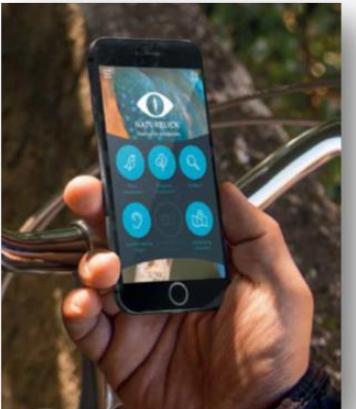

Data collected will be used to better understand the problem, and will help support a policy response as formulated in the European Marine Strategy Framework Directive.

Using citizen science butterfly counts to predict species population trends

Emily B. Dennis , Byron J.T. Morgan, Tom M. Brereton, David B. Roy, Richard Fox

First published: 05 May 2017 | <https://doi.org/10.1111/cobi.12956> | Cited by: 15

The screenshot shows the homepage of the Big Butterfly Count website. It features a large green banner at the top with the text "big butterfly count" and the dates "19th July – 11th August". Below the banner is a smaller text area encouraging users to "Help us take nature's pulse by joining the big butterfly count." followed by a link "Find out more about this project". To the right of this text is a photograph of a butterfly. At the bottom right of the page is a large orange button with the text "Log my sightings (until end of August)". Above the button are social media sharing icons for Twitter, Facebook, and others. The overall background has a light blue sky and green grass texture.

Common Traits of Citizen Science Projects

- ✓ Actively involve Participants;
- ✓ Engage Participants with Data;
- ✓ Use a Systematic Approach to Producing Reliable Knowledge;
- ✓ Participants are Primarily Not Project-Relevant Scientists;
- ✓ Citizen Science Projects Help Advance Science;
- ✓ Participants in Citizen Science Can Benefit from Participation;
- ✓ Citizen Science Projects Communicate Results.

Advancing science is broadly defined; Citizen
“Projects where participants are solely engaged
in science communication or science policy but
do not have a direct connection to the data
generation or analysis and application do not
rigorously weigh and organize evidence
– data are not exchanged, ignored or selectively
subsumed to create a local impact.”

Bioblitzes

Recording site

National surveys

Other projects

Bioblitzes

Aims:

- raise awareness of biodiversity and the importance of biological recording
- generate a biodiversity inventory for a given site

On average, 30 different surveys were carried out in each BioBlitz; over 1,500 participants contributing over the last 6 years.

About 77,4% participants declared that they are looking forward and ready for the next Bb!

Toward a citizen science strategy in Italy

Tavola rotonda

“Verso una strategia condivisa per la citizen science in Italia”

5 – 6 Aprile 2018

Report “Toward a shared strategy for citizen science in Italy”
(Agnello G., Sforzi A. & A. Berditchevskaia, 2018)

Guidelines for CS in Italy

The guidelines are identified as a "policy brief": a summary document of the main aspects relevant to the development of the Citizen Science in Italy.

It is intended for Ministries, public bodies and administrations and aims to offer recommendations for a structural recognition of Citizen Science in scientific research processes at national and regional level.

**Verso una strategia nazionale condivisa:
Linee guida per lo sviluppo della Citizen Science in Italia**

Sintesi

La Citizen Science (CS) è il coinvolgimento attivo dei cittadini nella raccolta, analisi e interpretazione di dati a fini scientifici. Per sua stessa natura, essa svolge un ruolo a livello sociale, scientifico, educativo e politico, contribuendo alla formazione di persone maggiormente conscienti e consapevoli. Per questo, al pari di quanto è avvenuto in molti paesi, è sempre più importante tradurre i principi della CS in politiche locali e nazionali. È altresì importante fornire strumenti e modalità operative capaci di supportare il coinvolgimento più ampio possibile della società. Questo documento è una sintesi dei principali aspetti necessari per lo sviluppo della CS in Italia. È destinato a Ministeri, enti e amministrazioni pubbliche e si propone di offrire linee guida e raccomandazioni per un riconoscimento strutturale della CS, sia attraverso l'inserimento in strumenti normativi e di programmazione esistenti, sia con lo sviluppo di una specifica strategia. Il testo è il risultato di un processo partecipativo svolto sotto il patrocinio della Accademia Nazionale delle Scienze, nell'ambito del progetto Horizon 2020 "Doing It Together Science" (DITOS), coordinato dalla Associazione Europea di Citizen Science (ECSA) e dal Museo di Storia Naturale della Maremma. Complessivamente sono stati coinvolti oltre cinquanta esperti di università, centri di ricerca, musei scientifici, associazioni, enti pubblici italiani con vari livelli di esperienza nel settore della CS, con lo scopo di consolidare la rete nazionale di CS in Italia e promuovere collaborazione con la pubblica amministrazione. Per le modalità operative ed i risultati conseguiti, questa esperienza può essere un utile riferimento per lo sviluppo di simili azioni in altri contesti nazionali.

Riconoscimenti internazionali della Citizen Science

I progetti di CS includono un'ampia varietà di attività, in quasi tutte le discipline scientifiche, con un livello variabile di coinvolgimento dei cittadini. Tra il 2013 e il 2014 sono state fondate associazioni internazionali con sede negli Stati Uniti (CSAI), in Europa (ECSA) ed Australia (ACSA), che promuovono networking, il coinvolgimento dei responsabili decisionali e politici e lo scambio di buone pratiche. ECSA, in particolare, ha elaborato alcuni principi chiave della CS, condivisi successivamente dalla comunità internazionale e tradotti in 26 lingue¹. In alcuni paesi europei si sono inoltre stabilite delle reti di coordinamento nazionale. Nel 2014, in Austria, la piattaforma online Österreich forscht viene attivata su base volontaria ed ospitata presso l'Università BOKU a Vienna. Un'altra piattaforma, Zentrum für Citizen Science², è stata istituita dal Ministero dell'Istruzione, Scienza e Ricerca e funge da centro di informazione ed assistenza. Nel 2016 in Germania, nell'ambito del programma GEWISS³ sostenuto dal Ministero federale tedesco dell'Istruzione e della Ricerca, è stato pubblicato il Green Paper che delinea la "Strategia di Citizen Science 2020 per la Germania". Seguendo le raccomandazioni del Green Paper, lo stesso Ministero tedesco ha presentato una linea di finanziamento dedicata. La Commissione Europea ha riconosciuto l'importanza di coinvolgere la società nella ricerca scientifica creando due linee di finanziamento Horizon 2020, denominate Science With and For Society (SwafS 15 e 17), mirate a promuovere la CS. Anche altri strumenti di finanziamento a livello europeo, come LIFE e COST Action, hanno contribuito a sostenere numerosi progetti. Un importante esempio di supporto politico a livello nazionale è il Federal Crowdsourcing & Citizen Science Act⁴ degli Stati Uniti, tradotto in legge come parte della American Innovation and Competitiveness Act nel Gennaio 2017. Il testo afferma che il crowdsourcing e la CS sono in grado di portare numerosi vantaggi per il governo e per i cittadini. Per sostenere la CS, l'Amministrazione del governo degli Stati Uniti ha lanciato CitizenScience.gov⁵, che riunisce tutti i progetti finanziati a livello federale e promuove il suo "Toolkit" per la CS.

Linee guida per la Citizen Science in Italia DITOS Policy Brief #6 - March 2019

Guidelines: final recommendations

- ✓ **Integrate Citizen Science into national and regional strategic planning tools.**
- ✓ **Develop Citizen Science strategies in different domains** (e.g. nature conservation, sustainable development, education, cultural heritage, public health, agriculture...).
- ✓ **Adopt a participatory process** for the implementation of the actions described above, drawing inspiration from values of inclusiveness and recognition of existing competences and best practices.
- ✓ **Create opportunities for national funding** to strengthen and support over time the Italian community of Citizen Science, with particular reference to young researchers and allow the development of capacities and infrastructures in line with what is happening in other international contexts.
